

# Kenworth Plant, Sainte-Thérèse, Québec

Design and fabrication effectiveness exceeded our customer's expectations when it came to deadline.

In the middle of the busiest production season, all the components including joists, steel deck and structural trusses were delivered on time. The bowstring geometry of trusses represented a productivity challenge for fabrication considering the tight delivery schedule.

"Canam did an excellent job on the project. With its design speed, fabrication of components, respect of the tight deadline, Canam contributed to the success of the project," says Benoît Legault of ADF.

A last minute order is the perfect opportunity for Canam to show our production speed.

---

Dimension: Over 200,000 square feet

---

Location: Sainte-Thérèse, Quebec

---

Period: Spring 1999

---

Owner: Kenworth

---

Architect: Stendel & Reich

---

Engineer: Nicolet, Chartrand, Knoll

---

Fabricator: Au Dragon Forgé (ADF)

---

Contractor: Hervé Pomerleau

---

Joists: 1,500 joists

---

Steel deck: 265,000 square feet

---

Trusses: 12 trusses

---
